

ABSTRACT

1  
2 *a* *apparatus, process, and method*  
An ~~apparatus and process~~ *is* for inputting and detecting a display data channel by which data  
3 relating to a monitor ~~are~~ *is* transmitted to a computer in manufacturing a monitor. The ~~apparatus~~  
4 ~~according to the present invention~~ includes an input device which has an automatic signal supplying  
5 *for inputting* element, ~~for input~~ the display data channel for the monitor in a facilities for manufacturing the  
6 monitor, *a* driving device for driving the inputting device by a predetermined electric signal, *an*  
7 interfacing section for outputting ~~the same~~ *a* voltage signal as an initial signal, which ~~is~~ *is?* switched at  
8 a different time according to a result of ~~input~~ *the to* the display data channel, *and* a determining device for  
9 generating a predetermined electric signal to control the driving device and for analyzing an output  
10 signal from the interfacing section to determine whether or not the display data channel is normally  
11 input into the computer.
